Lights out, bed bugs.

Bedlam turns bed bugs into dead bugs.

Kill Bed Bugs where they hide and get lasting control you can count on

Bedlam® controls Bed Bugs, Dust Mites, Fleas, Lice and Ticks by killing on contact and providing lasting residual performance. Bedlam is labeled for use in the toughest hiding places. As a water-based product, it won't stain water-safe fabrics and it is non-irritating to humans and animals. Bedlam works for the most demanding jobs—rest assured.

CONVENIENT AEROSOL SPRAY

- Broad label for flexible use
- Kills on contact, with residual control
- Non-irritating, non-staining water-based formula*

* If you are unsure if the fabric or surface is water-safe, spray an inconspicuous area to test for possible staining or discoloration.

Effective bed bug application

For best results, in addition to treatment with Bedlam® Insecticide, pest control professionals should include additional tactics such as those listed below.

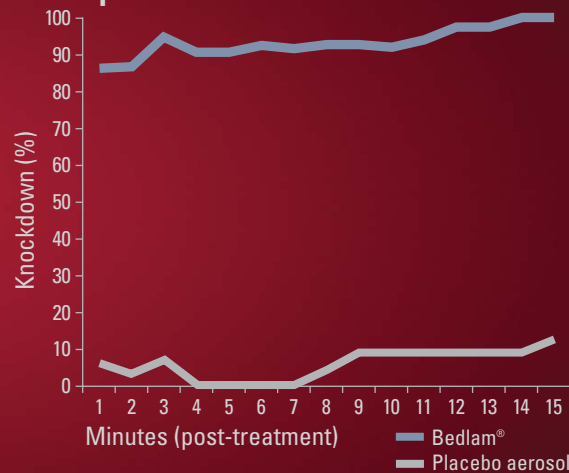

- Conduct a thorough inspection to locate the infestation. Be certain to look in harborages that offer the bed bug isolation and darkness.
- Reduce and remove clutter from the room
- Dispose of infested items that can be discarded
- Encase or bag articles that may be infested, but will not be laundered or discarded
- Remove bedding, clothing and other items that may be laundered or dry cleaned. Wash and dry on "high heat" dryer setting to achieve a temperature of 185°F.

Broad usage

Bedlam® Insecticide aerosol is effective as both a surface spray or as a crack and crevice treatment in hard-to-reach areas of non-food indoor areas, including:

Apartments	Kennels	Restaurants
Homes	Motels	Schools
Hospitals	Nursing Homes	Warehouses
Hotels	Offices	

Speed of knockdown

Residual Efficacy

Maximum performance

For listed insects, use Bedlam Insecticide as a component of an Integrated Pest Management (IPM) Program in combination with other products such as NyGuard® IGR Concentrate or Onslaught™ Microencapsulated Insecticide (unless expressly prohibited by the product label).
